

1.12 Python operations MySQL database

MySQL Connector/Python Developer Guide:

<https://dev.mysql.com/doc/connector-python/en/>

➤ 安裝 mysql.connector 模組

Install corresponding Python 3 module on linux:

```
# sudo apt-get install python3-mysql.connector
```

Install corresponding Python 2 module on linux:

```
# sudo apt-get install python-mysql.connector
```

Install corresponding Python 3 module on windows

```
# pip install mysql-connector-python
```

<https://pypi.org/project/mysql-connector-python/>

➤ Python MySQL Connect Database

建立「mydatabase 資料庫」，建立「customers」，細節如下：

Try connecting to the database "mydatabase":

```
#!/usr/bin/python

# -*- coding: utf-8 -*-

import mysql.connector

mydb = mysql.connector.connect(
    host="localhost",
```

```
    user="root",  
    passwd="1234",  
    database="mydatabase"  
)  
mydb.close()
```

範例: operation_mysql.py

➤ 插入資料(insert)

```
#!/usr/bin/python  
# -*- coding: utf-8 -*-  
import mysql.connector  
  
mydb = mysql.connector.connect(  
    host="localhost",  
    user="root",  
    passwd="1234",  
    database="mydatabase"  
)  
  
mycursor = mydb.cursor()  
  
sql = "INSERT INTO customers (name, address) VALUES (%s, %s)"  
val = ("John", "Highway 21")  
  
mycursor.execute(sql, val)
```

```
#提交
```

```
mydb.commit()
```

```
print(mycursor.rowcount, "record inserted.")
```

```
範例: operation_mysql2.py
```

```
#!/usr/bin/python
```

```
# -*- coding: utf-8 -*-
```

```
import mysql.connector
```

```
from mysql.connector import errorcode
```

```
# Obtain connection string information from the portal
```

```
config = {
```

```
    'host': 'localhost',
```

```
    'user': 'root',
```

```
    'password': '1234',
```

```
    'database': 'mydatabase'
```

```
}
```

```
# Construct connection string
```

```
try:
```

```
    conn = mysql.connector.connect(**config)
```

```
    print("Connection established")
```

```
except mysql.connector.Error as err:

    if err.errno == errorcode.ER_ACCESS_DENIED_ERROR:

        print("Something is wrong with the user name or password")

    elif err.errno == errorcode.ER_BAD_DB_ERROR:

        print("Database does not exist")

    else:

        print(err)

else:

    cursor = conn.cursor()

    # Insert some data into table

    cursor.execute("INSERT INTO inventory (name, quantity) VALUES (%s, %s);",

    ("banana", 150))

    print("Inserted", cursor.rowcount, "row(s) of data.")

    # Cleanup

    conn.commit()

    cursor.close()

    conn.close()

    print("Done.")
```

範例: operation_mysql3.py

➤ 讀取資料 (read)

```
#!/usr/bin/python
```

```
# -*- coding: utf-8 -*-

import mysql.connector
from mysql.connector import errorcode

# Obtain connection string information from the portal
config = {
    'host': 'localhost',
    'user': 'root',
    'password': '1234',
    'database': 'mydatabase'
}

# Construct connection string
try:
    conn = mysql.connector.connect(**config)
    print("Connection established")
except mysql.connector.Error as err:
    if err.errno == errorcode.ER_ACCESS_DENIED_ERROR:
        print("Something is wrong with the user name or password")
    elif err.errno == errorcode.ER_BAD_DB_ERROR:
        print("Database does not exist")
    else:
        print(err)
else:
    cursor = conn.cursor()
```

```
# Read data

cursor.execute("SELECT * FROM inventory;")

rows = cursor.fetchall()

print("Read",cursor.rowcount,"row(s) of data.")

print type(rows)

# Print all rows

for row in rows:

    print("Data row = (%s, %s, %s)" %(str(row[0]), str(row[1]),
str(row[2])))

# Cleanup

cursor.close()

conn.close()

print("Done.")
```

範例: operation_mysql4.py

➤ 更新資料(update)

```
#!/usr/bin/python

# -*- coding: utf-8 -*-

import mysql.connector

from mysql.connector import errorcode
```

```
# Obtain connection string information from the portal
config = {
    'host': 'localhost',
    'user': 'root',
    'password': '1234',
    'database': 'mydatabase'
}

# Construct connection string
try:
    conn = mysql.connector.connect(**config)
    print("Connection established")
except mysql.connector.Error as err:
    if err.errno == errorcode.ER_ACCESS_DENIED_ERROR:
        print("Something is wrong with the user name or password")
    elif err.errno == errorcode.ER_BAD_DB_ERROR:
        print("Database does not exist")
    else:
        print(err)
else:
    cursor = conn.cursor()

    # Update a data row in the table
    cursor.execute("UPDATE inventory SET quantity = %s WHERE name
= %s;", (200, "banana"))
```

```
print("Updated", cursor.rowcount, "row(s) of data.")

# Cleanup
conn.commit()
cursor.close()
conn.close()
print("Done.")
```

範例: operation_mysql5.py

➤ 刪除資料(delete)

```
#!/usr/bin/python
# -*- coding: utf-8 -*-

import mysql.connector
from mysql.connector import errorcode

# Obtain connection string information from the portal
config = {
    'host': 'localhost',
    'user': 'root',
    'password': '1234',
    'database': 'mydatabase'
}

# Construct connection string
```

```
try:

    conn = mysql.connector.connect(**config)

    print("Connection established.")

except mysql.connector.Error as err:

    if err.errno == errorcode.ER_ACCESS_DENIED_ERROR:

        print("Something is wrong with the user name or password.")

    elif err.errno == errorcode.ER_BAD_DB_ERROR:

        print("Database does not exist.")

    else:

        print(err)

else:

    cursor = conn.cursor()

# Delete a data row in the table
cursor.execute("DELETE FROM inventory WHERE name=%(param1)s;",
{'param1':"orange"})

print("DELETE FROM inventory WHERE name=%s;", "'apple'")

cursor.execute("DELETE FROM inventory WHERE name=%s;",
"'apple'")

print("Deleted",cursor.rowcount,"row(s) of data.")

# Cleanup
conn.commit()

cursor.close()

conn.close()
```

```
print("Done.")
```

範例: operation_mysql6.py

<https://docs.microsoft.com/zh-tw/azure/mysql/connect-python>

➤ 小專案

目標：將溫度 DS18B20 溫度感測器，傳入本機資料庫

1、建立資料庫

IOT(utf8_unicode_ci)

temperature_DB

=====

ID	userid	temperature	datetime
INT	INT	float	datetime
A_I			
Primary Key			

1	1	25.2	2015/11/28 19:00:00
2	1	26.6	2015/11/28 21:00:00

#	名稱	型態	編碼與排序	屬性	空值	預設值	額外資訊	動作
<input type="checkbox"/>	1 ID	int(11)		否	無	AUTO_INCREMENT		修改 刪除 主鍵 U 唯一 索引 空間 全文搜尋 更多
<input type="checkbox"/>	2 userid	int(11)		否	無			修改 刪除 主鍵 U 唯一 索引 空間 全文搜尋 更多
<input type="checkbox"/>	3 temperature	float		否	無			修改 刪除 主鍵 U 唯一 索引 空間 全文搜尋 更多
<input type="checkbox"/>	4 datetime	datetime		否	無			修改 刪除 主鍵 U 唯一 索引 空間 全文搜尋 更多

瀏覽 結構 SQL 搜尋 新增 匯出 匯入

顯示第 0 - 1 列 (總計 2 筆, 查詢花費 0.0000 秒。)

```
SELECT * FROM `temperature_db`
```

☐ 全部顯示 | 資料列數: 25 | 搜尋資料列: 搜尋此資料表

依主鍵排序: 無

+ 選項

		ID	userid	temperature	datetime
<input type="checkbox"/>	編輯 複製 刪除	1	1	26.2	2016-05-16 00:00:00
<input type="checkbox"/>	編輯 複製 刪除	2	1	26.7	2016-05-15 00:00:00

2、撰寫 python 程式

範例：upload_temperature_mysql.py
